Act 3.2 - Árbol Heap: Implementando una fila priorizada

Programación de estructuras de datos y algoritmos fundamentales (Gpo 610)

Eduardo López Benítez

Fidel Morales Briones A01198630

Casos Prueba:

Heap 1

```
priorityQueue *listaPrioridadHeap1 = new priorityQueue();
219
           cout << "HEAP 1:" << endl;</pre>
          // empty
          cout << "empty: " << listaPrioridadHeap1->empty() << endl;</pre>
          listaPrioridadHeap1->push(5);
          listaPrioridadHeap1->push(3);
           listaPrioridadHeap1->push(26);
           listaPrioridadHeap1->push(15);
          listaPrioridadHeap1->push(25);
          listaPrioridadHeap1->push(25);
          // pop
          listaPrioridadHeap1->pop();
          cout << "top: " << listaPrioridadHeap1->top() << endl;</pre>
          // empty
          cout << "empty: " << listaPrioridadHeap1->empty() << endl;</pre>
          // size
          cout << "size: " << listaPrioridadHeap1->Size() << endl;</pre>
           listaPrioridadHeap1->print();
